

Institutional Vehicle Booking and Usage Register

A practical solution for transport management

By Bharath E - PDKVCET - AIDS

1. The Problem & Who is Affected

Problem:

- Vehicles are booked via phone calls and a paper diary.
- Double bookings are common and discovered too late.
- No record of actual usage, making it impossible to attribute costs to departments.

Who is affected:

- The Transport Clerk (stressful double-bookings).
- Departments (delayed or missing vehicles).
- The Transport Officer (no data for cost tracking).

2. Our Solution

A digital register that securely records bookings, automatically blocks overlapping requests, and instantly calculates distance usage per department.

3. Capture Booking

Institutional Vehicle Booking & Usage Register

Transport Office — PDKVCET

offline

Book a Vehicle

Register

Usage by Department

VEHICLE

Select vehicle

DEPARTMENT

e.g. AIDS

REQUESTED BY

offline

Book a Vehicle

Register

Usage by Department

Search vehicle, name, department, purpose...

All statuses

Could not reach the server. Showing locally queued entries only.

5. Usage Dashboard & Derived Figures

Derived figures (Total KM and Trip Count) are calculated on the server. Bookings without KM yet are excluded from total distance but included in trip count.

Register

Usage by Department

Could not reach the server to load usage figures.

6. What Works & Unfinished Features

What Works:

- Full end-to-end booking capture and validation.
- Server-side double booking prevention.
- Real-time usage aggregation by department.
- Offline mode (queues bookings and syncs when reconnected).

Unfinished:

- No authentication/login system.
- No edit or cancel UI directly from the frontend.

7. Next Improvement

Next Step: Add a vehicles table (make, capacity, fuel type) to calculate the actual financial cost per department, not just the distance traveled.
